### Consultation on draft Delirium and Hip Fracture Care Clinical Care Standards

In collaboration with consumers, clinicians, researchers and health service organisations, the Australian Commission on Safety and Quality in Health Care has developed two draft Clinical Care Standards: *Delirium Clinical Care Standard* and *Hip Fracture Care Clinical Care Standard*.

These draft Clinical Care Standards are now available for public consultation.

Feedback is sought via an online survey or in writing by close of business Friday, 3 July 2015.

In developing these draft Clinical Care Standards, the most up-to-date guidelines and standards have been considered.

Find out about the consultation process and access the draft Clinical Care Standards, the online survey, indicator specifications and factsheets at [www.safetyandquality.gov.au/ccs/consultation](http://www.safetyandquality.gov.au/ccs/consultation)

## Reports

*National Consensus Statement: essential elements for safe and high-quality end-of-life care*  
 Australian Commission on Safety and Quality in Health Care  
 Sydney: ACSQHC, 2015.

|       |   |
|-------|---|
| URL   | <a href="http://www.safetyandquality.gov.au/endoflifecare">http://www.safetyandquality.gov.au/endoflifecare</a>   |
| Notes | <p>The Australian Commission on Safety and Quality in Health Care has published a consensus statement describing the essential elements for providing safe and high-quality care at the end of life. The <i>National Consensus Statement</i> has been endorsed by the Australian Health Ministers as the national approach to the delivery of end-of-life care in Australian hospitals.</p> <p>In Australia, more than 50% of deaths occur in hospitals, despite surveys reporting the majority of people would prefer to die at home. Hospitals are designed for rapid assessment, treatment and discharge of patients. New models of care may be needed to consistently deliver safe and high-quality end-of-life care in these settings.</p> <p>The purpose of the consensus statement is to set out the principles and elements that shape the delivery of safe and high-quality end-of-life care in hospitals and other acute health services.</p> |

## Journal articles

*Aiming higher to enhance professionalism: Beyond accreditation and certification*  
 Chassin MR, Baker DW  
 Journal of the American Medical Association 2015;313(18):1795-96.

*The PRONE score: an algorithm for predicting doctors' risks of formal patient complaints using routinely collected administrative data*  
 Spittal MJ, Bismark MM, Studdert DM  
 BMJ Quality & Safety 2015;24(6):360-68.

|       |  |
|-------|--|
| DOI   | Chassin and Baker <a href="http://dx.doi.org/10.1001/jama.2015.3818">http://dx.doi.org/10.1001/jama.2015.3818</a><br>Spittal <a href="http://dx.doi.org/10.1136/bmjqs-2014-003834">http://dx.doi.org/10.1136/bmjqs-2014-003834</a>   |
| Notes | <p>A pair of items looking at aspects of medical professionalism.</p> <p>Chassin and Baker argue that we can and should expect more from health professionals. They need to move beyond codes of conduct and meeting the needs of accreditation and certification to be leaders on demanding improvements on harm, safety, excellence and improvement in themselves, their colleagues and their institutions as they seek “consistent excellence across the full continuum of care”.</p> <p>Spittal et al look at a darker facet and describe a potential method of identifying doctors at risk of generating complaints. Their tool – the PRONE (Predicted Risk Of New Event) score – is a 22-point scoring system that indicates a doctor's future complaint risk based on four variables: a doctor's specialty, gender, the number of previous complaints and the time since the last complaint. They report that the score performed well in predicting subsequent complaints, “exhibiting strong validity and reliability and reasonable goodness of fit (c-statistic=0.70).”</p> |

*Hospitals should be exemplars of healthy workplaces*

Russell LM, Anstey MHR, Wells S

Medical Journal of Australia 2015;202(8):424-26.

|       |  |
|-------|--|
| DOI   | <a href="http://dx.doi.org/10.5694/mja14.01437">http://dx.doi.org/10.5694/mja14.01437</a>  |
| Notes | In a similar vein to the item in last week's <i>On the Radar</i> looking at how the climate of worker safety could relate to patient safety was this call for hospitals to show leadership and model practices and behaviours. This goes beyond the workplace safety aspects and, according to the authors, should be "integral part of the push for quality and safety in clinical care and also contributes to the triple bottom line for health care: better patient experience of care; better population health through improved social and environmental impacts; and better financial performance." |

*Exploring the role of communications in quality improvement: A case study of the 1000 Lives Campaign in NHS Wales*

Cooper A, Gray J, Willson A, Lines C, McCannon J, McHardy K

Journal of Communication in Healthcare 2015;8(1):76-84.

|       |  |
|-------|--|
| DOI   | <a href="http://dx.doi.org/10.1179/1753807615Y.0000000006">http://dx.doi.org/10.1179/1753807615Y.0000000006</a>  |
| Notes | Communication is fundamental to the success of almost any form of change management, in health or any other setting. This article describes the development and implementation of the communications strategy for the 1000 Lives Campaign (a large-scale national quality improvement (QI) collaborative that aimed to save an additional 1000 lives and prevent 50 000 episodes of harm) in Wales. The strategy aimed "to engage the hearts and minds of frontline National Health Service (NHS) staff in the Campaign and promote their awareness and understanding of specific QI interventions and the wider patient safety agenda". |

*Computerised clinical decision support systems to improve medication safety in long-term care homes: a systematic review*

Marasinghe KM

BMJ Open 2015;5(5).

|       |  |
|-------|--|
| DOI   | <a href="http://dx.doi.org/10.1136/bmjopen-2014-006539">http://dx.doi.org/10.1136/bmjopen-2014-006539</a>  |
| Notes | Paper reporting on a systematic review examining the impact of computerised clinical decision support systems (CCDSS) on medication safety in long-term care homes. Notwithstanding the limited literature, the author reports that such systems improve the quality of prescribing decisions, detected adverse drug reactions, triggered warning messages and reduced injury risk among older adults. |

For information on the Commission's work on medication safety, see

*Medical Devices Safety Update*  
Volume 3, Number 3, May 2015

<https://www.tga.gov.au/publication-issue/medical-devices-safety-update-volume-3-number-3-may-2015>

The Therapeutic Goods Administration (TGA) has released the latest edition of its medical device safety bulletin. Topics covered in this issue include:

- The need to retain medical devices associated with adverse event reports
- Laparoscopic morcellator review of instructions for use now complete
- Pleural catheters practice points
- Recent safety alerts
- What to report? Report adverse events, as well as near misses
